

BETA 42AS/B9N

Set of 9 combination wrenches in roll-up wallet made of durable polyester

Features

The wide range of sizes makes it suitable for different applications and sectors.

Resistance and protection

Even under heavy stress, the wrench gradually deforms, preventing sudden breakage and ensuring operator safety. Semi-machined round section moulding ensures a homogenous structure, while the chrome-plated nickel finish offers lasting protection against external influences, passing ISO 2819 tests.

Speed and accessibility

The 15° inclination of the fork with respect to the axis reduces the angle of recovery, while the reduced thickness of the wrench improves accessibility even in tight spaces.

High performance

The wrench length, which is longer than the average length of competitors, allows high torques to be applied with less effort.

Ergonomics

The polygonal eye is inclined by 15° for greater hand protection during use. The shape is made directly from a mould, without additional bending.

ENVELOPE

The durable, technical fabric envelope ensures optimal storage of each combination wrench.
