SMD ▪ B
17-21/R6C-AP1Q2L/3T

Features
• Package in 8mm tape on 7” diameter reel.
• Compatible with automatic placement equipment.
• Compatible with infrared and vapor phase reflow solder process.
• Mono-color type.
• Pb-free.
• The product itself will remain within RoHS compliant version.
• Compliance with EU REACH
• Compliance Halogen Free ,(Br <900 ppm ,Cl <900 ppm , Br+Cl < 1500 ppm).

Description
• The 17-21 SMD LED is much smaller than lead frame type components, thus enable smaller board size, higher packing density, reduced storage space and finally smaller equipment to be obtained.
• Besides, lightweight makes them ideal for miniature applications. etc.

Applications
• Backlighting in dashboard and switch.
• Telecommunication: indicator and backlighting in telephone and fax.
• Flat backlight for LCD, switch and symbol.
• General use.
## Device Selection Guide

Package Dimension

Suggested pad dimension is just for reference only. Please modify the pad dimension based on individual need.

Note: Tolerances unless mentioned ±0.1mm. Unit = mm
Moisture Resistant Packing Materials

Label Explanation

- CPN: Customer's Product Number
- P/N: Product Number
- QTY: Packing Quantity
- CAT: Luminous Intensity Rank
- HUE: Chromaticity Coordinates & Dom. Wavelength Rank
- REF: Forward Voltage Rank
- LOT No: Lot Number

Label
Precautions For Use

1. Over-current-proof
   Customer must apply resistors for protection, otherwise slight voltage shift will cause big current change (Burn out will happen).

2. Storage
   2.1 Do not open moisture proof bag before the products are ready to use.
   2.2 Before opening the package: The LEDs should be kept at 30°C or less and 90%RH or less.
   2.3 After opening the package: The LED's floor life is 1 year under 30°C or less and 60% RH or less.
      If unused LEDs remain, it should be stored in moisture proof packages.
   2.4 If the moisture absorbent material (silica gel) has faded away or the LEDs have exceeded the storage time, baking treatment should be performed using the following conditions.
      Baking treatment: 60±5°C for 24 hours.

3. Soldering Condition
   3.1 Pb-free solder temperature profile
   
   ![Soldering Temperature Profile Diagram]

   3.2 Reflow soldering should not be done more than two times.
   3.3 When soldering, do not put stress on the LEDs during heating.
   3.4 After soldering, do not warp the circuit board.

4. Soldering Iron
   Each terminal is to go to the tip of soldering iron temperature less than 350°C for 3 seconds within once in less than the soldering iron capacity 25W. Leave two seconds and more intervals, and do soldering of each terminal. Be careful because the damage of the product is often started at the time of the hand solder.

5. Repairing
   Repair should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used (as below figure). It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
Application Restrictions

High reliability applications such as military/aerospace, automotive safety/security systems, and medical equipment may require different product. If you have any concerns, please contact Everlight before using this product in your application. This specification guarantees the quality and performance of the product as an individual component. Do not use this product beyond the specification described in this document.
